FOREWORD

This publication is intended for students of public-welfare administration who wish to understand the development of State welfare programs. Several States were studied, and the report for each State is being issued separately.

Material changes have occurred during the past few years in organization and services in Ohio, but the present program has developed from past experience. Therefore, it seems of value to issue for students of the subject this report of the development of State services for children. The picture given is of Ohio in February 1934, at the time an extended field visit was made to the State, and it should not be understood to represent the present situation.
A Historical Summary of State Services for Children in Ohio

DESCRIPTION OF STATE

Ohio ranked fourth in population among the States of the Union in 1930, with a population of 6,646,697. Great variation existed, however, in the density of population throughout the State, with 2,595 persons to the square mile in Cuyahoga County, which includes the city of Cleveland, and only 25 persons to the square mile in Vinton County. The average density for the whole State was 163 persons to the square mile. Eight cities in the State had populations of more than 100,000—Cleveland, Cincinnati, Toledo, Columbus, Akron, Dayton, Youngstown, and Canton. Several of these cities had an enormous growth in population during the 20 years from 1910 to 1930. Akron, for instance, jumped from 69,067 to 255,040; Cleveland from 560,663 to 900,429; and Toledo from 168,497 to 290,718.

About two-thirds of the population is designated as urban, although only 15 percent is reported as rural-farm. In spite of this large proportion of urban residents, 13 of the 88 counties in the State are classified as rural. The population is predominantly native white, with only 9.7 percent foreign-born and 4.7 percent Negro.

Ohio has from its early days held an important place in the economic and political life of the Nation. According to the latest available official estimate of the national wealth, the State ranked fourth in 1922, with its total wealth estimated at over 18 billion dollars, or $3,048 per capita. This wealth is largely derived from three sources: agriculture, mineral products, and manufacturing. In 1930 there were 219,296 farms in the State, covering more than 21 million acres of land. The farm property was valued at $2,012,957,000. In 1931 the State ranked sixth in the value of its crops and livestock ($272,000,000). In the same year the value of its mineral products ($139,928,000) placed the State sixth in this respect. However, it was the extensive development of manufacturing that was largely responsible for the rapid growth in population and the increased wealth of the State. In 1931 the State had 9,877 manufacturing establishments, with 506,960 wage earners receiving $593,025,000. The value of manufactured products for this year was $8,116,016,000, which placed the State fourth in rank, with only New York, Pennsylvania, and Illinois exceeding it.

As a result of these vast manufacturing activities there has been through the years a noticeable shifting from agriculture and rural life to industry and urban life, which was possibly more pronounced than in most States. With the break-down of industry during the economic depression and the resulting unemployment, the social problems of the State have been intensified because of this shift from rural to urban life.

STATE SERVICES FOR CHILDREN

STATE AND LOCAL GOVERNMENT

At the time Ohio was admitted to the Union, on February 19, 1803, there were only 16 other States. The State immediately assumed an important position, which it has continued to hold to the present time. The State constitution now in force was adopted in 1851 and is the second one under which Ohio has been governed. The Governor is elected for a 2-year term, as are also his associate officers—the Lieutenant Governor, the secretary of State, the State treasurer, and the attorney general. The State auditor is elected for 4 years. The superintendent of public works is appointed by the Governor for a term of 1 year, and the superintendent of public instruction is appointed for a term of 4 years. The legislature meets regularly in January of the odd-numbered years.2

Ohio completely reorganized its State government in 1921. The 68 separate governmental administrative agencies of the State were reduced to 32, which were assigned to the following eight departments: finance, commerce, highways, and public works; agriculture, health, industrial relations, education, and public welfare.4

There are 88 counties in the State. Fiscal authority is vested in the board of county commissioners, an elected body composed of three persons who serve for overlapping terms of 4 years. Responsibility for the conduct of charitable and correctional activities is in the process of changing. In 1934 the administration of blind relief, relief of nonresident poor, soldiers' burials, care of the tuberculous, and the general management of the county home were vested in county commissioners. The juvenile court administered mothers' aid in addition to its responsibilities for dependent, delinquent, and crippled children. The soldiers' relief commission administered soldiers' relief, and the board of the children's home managed the children's home and directed local child-placement work. If the county maintains a general or tuberculosis hospital, it is usually under the control of a separate board.5 Townships are required to provide for residents living outside cities, and cities are responsible for their own poor. Township and city provision for the poor commonly includes the care of dependents in their own homes, medical and surgical treatment, and the burial of indigents.6

DEVELOPMENT OF STATE WELFARE ADMINISTRATION

BOARD OF STATE CHARITIES

In 18677 the Ohio Legislature provided for the appointment of a board of State charities composed of five persons appointed by the Governor for overlapping terms of 3 years. This board was to investigate the whole system of the public charitable and correctional institutions of the State and to recommend such changes and additional provisions as were deemed necessary for their economical and

efficient administration. The board was to receive only actual traveling expenses incurred in the course of the work. Before funds were made available in 1869 for employment of a secretary, the board was dependent for secretarial work upon the part-time assistance of the chaplain of the State penitentiary. This board was abolished in 1879, but in 1876 a board with similar duties was created.

From its beginning the board of State charities was concerned with the management of all State institutions and of all county or municipal institutions caring for dependent, delinquent, and physically and mentally handicapped persons. State institutions were visited annually by members of the board, and the secretary inspected many jails, workhouses, and infirmaries throughout the State. In its annual reports the board made valuable suggestions as to desirable changes in the welfare program of the State and published statistics obtained from the institutions under its supervision. The board was especially concerned about the lack of provision for dependent children and, therefore, it encouraged the development of county children's institutions. At times this interest in the needs of children extended to visits to private institutions caring for children, although the board was given no responsibility for supervision of private charities.

In 1898 the need for State-wide information as to public relief was recognized, and the board was authorized to obtain information and statistics from all persons responsible for administration of public funds for relief or maintenance of the poor. During the next 15 years legislation was enacted giving the board power to call conferences of officials and agencies concerned with welfare problems, to visit and inspect all associations receiving children committed by the juvenile courts, and to pass upon all applications for incorporation made by associations organized to care for children. Responsibility was also given to the board to collect from persons legally responsible the cost of support of persons committed to State institutions for the insane, the feeble-minded, and the epileptic.

The year 1913 marks the most significant development in the work of the board, when it was given authority to accept guardianship of dependent children and to license and supervise the work of all agencies and institutions caring for children. A children's welfare department was established at this time to carry out these new responsibilities. A commission to codify and revise the laws of Ohio relative to children, appointed by the Governor in 1911, was largely responsible for this enlarged State program as well as for a comprehensive revision of the statutes affecting children.

STATE BOARD OF ADMINISTRATION

Before 1911 State institutions were administered by a board of trustees for each institution. All institutions were inspected by the State board of charities and for a few years by a committee of

---

Provided by the Maternal and Child Health Library, Georgetown University
women visitors appointed annually by the Governor, but each institution was an independent agency. Central control of institutions began in 1911 with the creation of the Ohio Board of Administration and the abolition of all boards of trustees of the 18 State institutions.

The board consisted of four persons (not more than two belonging to the same political party), appointed by the Governor for overlapping terms of 4 years. This was a paid board, each member receiving traveling expenses and a salary of $5,000 a year. The board was given complete control over all the institutions, appointing the superintendents and fixing the number and the salaries of the personnel of the institutions. The law provided for a central purchasing plan and for the appointment of a fiscal supervisor.

As part of the new State program for children, a bureau of juvenile research was authorized in 1913. It was put under the administration of the board of administration, probably because a small institution was planned as part of the equipment of the bureau. This classification of the bureau as an institution has persisted, although the institutional aspect of the bureau's work would be a minor factor if a State-wide mental-hygiene program for children were in operation.

REORGANIZATION OF STATE GOVERNMENT

Following the example of several other States, Ohio reorganized its State government in 1921, vesting complete executive powers in the Governor and creating eight administrative departments, each under the administration of a director appointed by the Governor, with the advice and consent of the senate, to hold office during the pleasure of the Governor. In the department of public welfare created by the administrative code, were placed all the welfare services of the State, including the administration of all State institutions and the administrative and supervisory services previously under the board of State charities. The Ohio Commission for the Blind was incorporated in the department, but the board of administration, the State board of clemency, and the board of State charities were abolished. The director of the department of public welfare was made a member of the Governor's cabinet and as such was expected to be in close touch with the other seven departments of the State government.

The administrative code did not attempt to prepare a detailed outline of organization for the different departments, and the work within the department of public welfare developed along the lines of each of the administrative units incorporated into the department. In 1927 a joint legislative committee was appointed on resolution of the general assembly to appraise the accomplishments of the government under the code and to recommend desirable changes. This committee, known as the joint committee on economy in public service, employed technical advice and assistance to study the activities of the State government and submitted a report in 1929.

The committee proposed a different form of organization within the department of public welfare, which it believed would coordinate
the institutions and provide a liaison between the institutions and
the director of public welfare. It was felt that a department as
large as this one, with such varied interests and with such diversified
activities, justified an assistant in general administrative direction.
This assistant director of public welfare should be the highest type
of technical administrator, appointed and retained for merit alone,
who would be the prime means of providing continuity of policy
through changing administrations.

Four divisions were suggested:

(1) The division of administration, directed by the assistant director, which
would include as bureaus the present fiscal, executive, agricultural, manufactur-
ing, and sales divisions as reorganized, and the support bureau, and would
give attention to questions of institutional management that apply to different
classes of institutions.

(2) The division of mental hygiene, directed by an expert in psychiatry and
administration of hospitals for the mentally diseased, which would have
charge of the hospitals for the insane, the institutions for the feeble-minded
and the epileptic, and of the State's program in the prevention and treatment
of mental disease and mental deficiency.

(3) The division of corrections, under the direction of a specialist in penal
administration, which would have jurisdiction over the administration of the
penal laws of the State and the operation of prisons and reformatories.

(4) The division of charities and child care, which would be an expansion
of the present division of charities and would include responsibility for the
operation of the industrial school for boys and the industrial school for girls.21

A few of the minor administrative changes proposed by this com-
mitee were adopted by the department in 1929, but with the change
of administration in 1931 the plans for establishing a division of
corrections and a division of mental hygiene were not put into
operation.

It has been the opinion of many persons in Ohio that the State
administrative plan should be modified to allow the appointment of
an unsalaried nonpartisan board to control the department of public
welfare and to appoint the director, similar to the organization of the
department of social welfare in New York. Such a plan was pro-
posed by the director of the department who served from 1923 to
1929 and by a commission appointed by the Governor in 1930 to
study the welfare situation in the State.22

It was the opinion also of the joint committee on economy in pub-
lic service that such a plan should be given consideration, with the
further provision that the chairman of the board sit in the Gover-
nor's cabinet. In order that continuity in service and freedom from
political interference should be assured to the department under the
present organization, the joint committee also recommended that the
assistant director and the heads of the other three divisions proposed
(division of charities and child care, division of corrections, and
division of mental hygiene) be appointed and retained under civil-
service procedure solely on the basis of merit.23

None of the plans for reorganization in methods of appointing
the directing staff of the department was adopted by statute, but the
importance of appointing persons with professional training has been
recognized by the State civil-service commission.

THE DEPARTMENT OF PUBLIC WELFARE

ORGANIZATION

The department of public welfare is headed by a director appointed by the Governor with the consent of the Senate to hold office during the pleasure of the Governor. There is no board, either administrative or advisory, attached to the department; hence the entire responsibility rests with the director. No qualifications are set by law for the position of director, but a proposed civil-service classification included the following qualifications, although the position is not subject to civil-service rules: "Either (1) education equivalent to that represented by graduation from a college or university of recognized standing, with specialization in social sciences, and 10 years of experience in the work involving management, organization, and/or investigation in the field of public welfare, or (2) any other equivalent combination of education and experience; wide knowledge of the administrative problems of public welfare and of the scope of service of the various divisions within the department; administrative ability; initiative; good judgment; good address." In spite of these specifications, there seems to have been no general recognition in Ohio of the need for appointing a professionally equipped director for the department of public welfare.

The director is appointed for a term of 2 years, but the actual period of service of directors who have held office during the 12 years of the department's existence has been influenced greatly by changes in administration. Of the four directors who have been appointed during this time, one held office for 6 years, two held office for 2 years, and the director at the time of this study was serving his second term of 2 years.

According to the administrative code of 1921,24 the director of each department in the State government was authorized to establish divisions within the department and to consolidate or to abolish any divisions named in the code. In addition to the commission for the blind and the newly created board of pardon and parole, which became a part of the department, the code named three officers for the department of welfare—the fiscal supervisor, the superintendent of charities, and the superintendent of pardon and parole. It was stipulated that each of these officers should be head of a division. However, at no time since the reorganization have all these officials and their respective divisions been in operation exactly as the code provided. The division of charities, directed by the superintendent of charities, has continued since 1921, but the "fiscal supervisor" was known in 1934 as the chief of the division of business administration. The board of pardon and parole with its superinten-

25 Laws of 1921, p. 107 (General Code 1932, sec. 154-8).
tendent was succeeded by a board of clemency in 1923, and this in turn was succeeded by the board of parole in 1931. Six additional divisions or bureaus have been set up, either by statute or by administrative order, namely, executive division, division of manufacturing and sales, bureau of examination and classification, bureau of criminal identification and investigation, division of probation and parole, and the bureau of juvenile research.

The directors of the divisions or bureaus, and the superintendents of the State institutions are directly responsible to the director of the department. Only four of these administrative units—the division of charities, the bureau of juvenile research, the commission for the blind, and the division of probation and parole—were primarily providing services outside the State institutions in 1934.

ACTIVITIES OF THE DIVISIONS AND BUREAUS

Executive Division.

GENERAL ADMINISTRATION

This division is under the direction of the executive secretary, who serves the director in the general administration of all activities of the department. The division is responsible for collecting statistical data from the State institutions showing the movement of population, the reasons for admission, and other pertinent information with respect to wards of the State. It is responsible for the transfer of persons from one institution to another, when the needs of inmates require such action, as well as for the removal to their State of residence of nonresidents found to be insane and in need of hospital care. The chief clerk of the department is in this division.

Division of Business Administration.

This division is responsible for buildings, grounds, and other properties connected with the State institutions and agencies under the control of the department of public welfare. It supervises the accounting and storekeeping systems of the institutions and agencies and works with them for the purpose of obtaining efficient business management. All duties assigned by law to the fiscal supervisor have been transferred to the chief of this division, who also serves as assistant director for the department. This division has general supervision over the work of the support bureau, which has charge of collections for the support of all persons committed to State hospitals for insane, the hospital for epileptics, and the institutions for feeble-minded. The support bureau was originally placed in the division of charities, but in 1929 it was transferred to the division of business administration. The staff of the division in 1929 was largely clerical, but the support bureau was in charge of a chief assisted by three field workers.

BOARD OF PAROLE

The board of parole is composed of four persons appointed by the director of public welfare, with the approval of the Governor, for

---

Provided by the Maternal and Child Health Library, Georgetown University
overlapping terms of 4 years. The board is a salaried group, not
more than two members belonging to the same political party. Each
member receives a salary of $6,000 annually. Sole power is given to
the board to determine the advisability of parole and final release of
prisoners from penal or reformatory institutions.29

COMMISSION FOR THE BLIND

The Ohio Commission for the Blind created in 1908 29 was made
a part of the department of public welfare at the time of the re-
organization in 1921, although the provision for a commission of
six members was retained. Five of these commissioners are ap-
pointed by the Governor, and the sixth is the superintendent of the
State school for the blind. The term of office is 5 years, and one
appointment is made each year, but the report of the department
for 1931 indicated that appointments had been allowed to lapse and
the commission was rarely called together. The professional staff
of the commission in 1934 consisted of an ophthalmologist, a super-
visor, and four nurses in the conservation of vision department; a su-
pervisor and six home teachers in the home-work department; and an
executive secretary. In addition to a clerical staff, the commission
also maintains a sales staff, as products made by the blind are disposed
of through the commission. The conservation of vision department
cooperates closely with the division of handicapped children of the
department of education in selecting children for sight-saving classes
and when advisable will plan clinics for children with defective
vision.

DIVISION OF CHARITIES

In the division of charities are lodged most of the supervisory and
administrative responsibilities that before the reorganization of
government had been vested in the board of State charities. Al-
though the major duties of this division have to do with the welfare
and protection of children, the division also has certain responsi-
bilities for conditions in county homes, jails, and workhouses
throughout the State. From 1930 to 1933 a bureau of county consul-
tation was maintained, through which assistance and advice were
given to local administrative units.

In 1933 the superintendent of this division took advantage of the
provision in the statute permitting the appointment of an advisory
board.29 The board is appointed by the director of the department of
public welfare, with the approval of the Governor, and serves
without compensation, although actual and necessary expenses in
connection with its services may be paid. The advisory board in
1933 was composed of five members, including representatives from
a public agency for children, a private agency for children, the
Ohio Institute, the State university, and a juvenile court. The
board held meetings at irregular intervals, frequently meeting
bimonthly for the discussion of policies and plans for the division.
The board has no administrative authority.

In addition to the superintendent of charities, the professional
staff during 1933 consisted of 3 bureau chiefs, 24 social workers,
6 nurses, and for part of the year a county consultant.

29 Laws of 1931, pp. 585-593.
30 Laws of 1908, p. 362; Laws of 1924, p. 124 (General Code 1932, sec. 154-55.).
The division had been organized on a specialized basis, with three bureaus (the child-care bureau, the crippled children's bureau, and the institution-inspection bureau) each headed by a chief. Beginning April 1, 1934, a more general program was developed by combining the child-care and the institution-inspection bureaus. The crippled children's bureau continued, however, as a specialized activity. Under the old plan the child-care bureau operated on a district plan, whereas the institution-inspection bureau did not. The new plan reduced the number of districts from five to four and provided for generalized services to children's institutions and to individual children. It is felt that by so doing the work of the two former bureaus will be more closely integrated, and that workers from the State department will feel a keener interest in community organization within the district.

In addition to the central district, there are three predominantly rural districts, each of which includes from 20 to 30 counties. To each district are assigned 4 to 6 workers, who are responsible for the care of approximately 150 State wards and for supervision of about 30 institutions. The plan for the metropolitan district, which includes counties with large cities, involves cooperation with councils of social agencies. The agents assigned to this district also serve as consultants to the other districts. The division has never maintained district offices and does not do so under the new plan. All records will be kept in the central office, under the direction of district secretaries, and members of the staff will continue to make biweekly trips to the central office to attend conferences and to dictate records.

The plan recognizes the need for adding specialists to the staff to serve as consultants, as well as the need for appointing an assistant superintendent under civil-service regulations. In 1934 the certification of institutions, the supervision of jails, workhouses, and county homes, as well as certain business details in office management, were the responsibility of the former chief of the institution-inspection bureau.

**BUREAU OF JUVENILE RESEARCH**

The bureau of juvenile research is the only State agency, other than the hospitals for the insane and the institutions for the feebleminded, that is concerned with a mental-hygiene program. Some out-patient service for mental cases, largely for adults, is given by the State hospitals through clinics and by the social workers employed by one of the hospitals. The bureau was authorized by the general assembly of 1913 and established in July 1914 "for the purpose of mental, physical, and other examination, inquiry, or treatment" of children committed to it by the juvenile courts or referred to it by the division of charities or other public and private agencies or individuals. Its work is therefore entirely concerned with children.

The professional staff of the bureau in 1934 consisted of the director, who was a psychologist, four assistant psychologists, and one physician. In addition, there were two psychologists who were considered members of the staff but who were assigned for full time to the two State schools for delinquent children and whose salaries were

---

**Provided by the Maternal and Child Health Library, Georgetown University**
paid by the schools. Six students from the State university, representing the fields of medicine, sociology, psychology, and special education, assisted the staff during the year, receiving maintenance in addition to some practical experience. The appropriation for 1934 was about $45,000, of which $35,000 was a direct appropriation to the bureau for personal service, and $10,000 was an appropriation to the department of public welfare to meet maintenance costs of the home in which children are placed during a period of observation. This represented reductions of about 45 percent in personal service and 25 percent in maintenance from the appropriation of 1931 and necessitated a considerable reduction in service.

DIVISION OF PROBATION AND PAROLE

This division, which was organized in 1929, is responsible for supervision of parolees from the three penal institutions for men. Paroled persons from the Ohio Reformatory for Women and from the industrial schools for boys and for girls are under the direction of the institutions. The division is also responsible for supervision of the probation system of the State. Its work in the field of probation is primarily for adults, and little has been done in juvenile probation. It collects and publishes statistics on probation, but limitations in staff have prevented the development of a constructive probation service. In addition to the chief of the division, the staff in 1934 included a supervisor of parole and 24 parole officers.

BUREAUS SERVING THE PENAL INSTITUTIONS

Bureau of criminal identification and investigation.

This bureau was organized for the purpose of centralizing identifying data regarding persons convicted of felonies, and all known and habitual criminals, as well as for the purpose of providing assistance to local law-enforcement officials in investigating crimes. The bureau has been handicapped by its small employed personnel (prisoners do practically all the routine work), with the result that the work of investigation has been neglected, although the work of identification has been highly developed.

Bureau of examination and classification.

This bureau gives psychometric and psychiatric examinations to inmates referred to them by the penal institutions. Although at various times psychological tests have been given to all new inmates of an institution, the staff of the bureau is too small to do this as a routine. In addition to a psychiatrist and two psychologists, the bureau employed a sociologist, who interviewed the inmates and obtained information from relatives regarding the social problems of the families. As the bureau has no field staff, most of this social information is obtained through correspondence.

DIVISION OF MANUFACTURING AND SALES

This division, which employed a manager and a clerical staff in 1934, is responsible for the development of prison industries in the penal institutions of the State and for the disposal of goods manufactured as a result of these industries. This is the only division of

---

The bureau of examination and classification was abolished on July 1, 1935, after this study was made.
the State government that is self-sustaining and for which no appropriation is required. Receipts from sales are deposited in a rotary fund in the State treasury and are used to continue the work and to compensate employed prisoners.

ADMINISTRATION OF INSTITUTIONS

The organization of the department of public welfare has tended to improve the administration of institutions, without developing preventive and follow-up services correspondingly. Some provision is made for parole from penal and correctional institutions, but extra-institutional services from the hospitals for the mentally ill are very limited, and practically no such service is available in connection with the institutions for the mentally deficient.

The department of public welfare has complete authority over the management of 21 State institutions. This comprises all the State institutions, with three exceptions: The State school for the deaf, the State school for the blind, and the soldiers’ and sailors’ orphans’ home. The director of the department appoints the superintendents of the institutions under civil-service regulations and fixes their salaries in accordance with available appropriations. Each superintendent is responsible for the proper administration of his institution. Every effort has been made to avoid political influence in institutional administration, and to a great extent this has been accomplished, for vacancies in the institutions are often filled by promotion. Within each institution the superintendent has the power to appoint staff members in accordance with civil-service regulations.

The department of public welfare regulates the admission and discharge of institutional inmates in accordance with institution facilities. Inmates may be transferred from penal institutions to the institution for the criminal insane if their condition warrants such transfer, and children may be transferred from either of the industrial schools to institutions for the feeble-minded. However, it is necessary to have new commitments when children reach the age of 21, as commitment to the industrial schools does not hold after majority.

Fiscal control of the institutions is vested in the department of public welfare and the department of finance. Institutions submit budget estimates for the coming biennium to the director of the department of public welfare, who approves them and transmits them to the department of finance for final approval before submitting them to the Governor for inclusion in the State budget presented to the legislature.

The department of public welfare, as well as other State departments, has been faced with a real difficulty as a result of action taken by the legislature in 1928. At that time the date for closing the fiscal year was changed from June 30 to December 31. This has meant that for the period between the close of the biennium and the time that the legislature makes an appropriation no operating funds have been available. It has been the practice of the legislature to pass a partial or emergency appropriation early in the session to

---

Provided by the Maternal and Child Health Library, Georgetown University
permit the departments to function, but in 1933 the failure of the legislature to make a sufficient emergency appropriation hampered the department greatly and all but discontinued the work of the division of charities for several months.

The division of purchases and printing in the department of finance is responsible for the purchase of supplies and equipment and the superintendence of telephone and telegraph service for all departments and institutions of the State. In accordance with the statutes, supplies and equipment are purchased through competitive bidding unless the superintendent of purchases and printing grants a special release to an institution, permitting it to make purchases direct. Blanket releases are commonly granted to State institutions for the purchase of perishable goods, emergency repairs to machinery, and other items where “time is the essence of the contract.”

During the years 1929 and 1930, Ohio operated under what was known as the “lump sum” appropriation system, the amounts being appropriated in a lump sum for personal service and maintenance to the respective State departments, and then allotted by the director of finance on a quarterly basis. The system was not satisfactory to the department of public welfare, as it was felt that too much responsibility was placed in the hands of the director of finance. In 1931 the legislature and the director of finance abandoned the lump-sum system and readopted the budget system used prior to 1929.

The director of the department controls construction of all buildings at State institutions. He passes on plans and coordinates, insofar as possible, building plans in the different institutions. A consulting engineer and assistant are employed by the department to advise with the institutions on engineering problems.

The director of the department is required by law to visit the institutions, but the policy has been to rely upon the reports of the various bureaus, divisions, or specialists serving the institutions, although the director keeps in close touch with their general administration. The assistant director, who also serves as chief of the division of business administration, controls fiscal policies. An agriculturalist advises on problems of farm management and takes the initiative in suggesting improvements in farm policies. The division of manufacturing and sales is responsible for the industrial programs of the institutions, particularly penal institutions. Within the department there is no definite schedule for visits to the institutions, but as much time is spent by the different agents as is needed for investigation and consultation.

Only two of the institutions administered by the department of public welfare serve children only, the girls’ industrial school and the boys’ industrial school, although children are admitted to the institutions for the feeble-minded and epileptic, to the sanitarium for the tubercular, and occasionally to the hospitals for the insane. The staff of the division of charities, at the request of the director of the department, makes occasional visits to the girls’ industrial school and gave considerable assistance at one time when the institution was in difficulty. The division of charities also assisted the charitable institutions of the State in many ways, but the Department of Public Welfare was not responsible for these institutions. In the more recent years, however, the Department of Public Welfare has taken more responsibility for the development of the policies and procedures of the charitable institutions.

PUBLICATIONS AND EDUCATIONAL ACTIVITIES

From its inception the Ohio Board of State Charities had as one of its purposes to promote understanding of the welfare program of the State. In addition to its annual report, the board published a quarterly bulletin called the Ohio Bulletin of Charities and Corrections. After the reorganization of the department of public welfare the division of charities published the Ohio Welfare Bulletin (first quarterly and later bimonthly), with news of division undertakings and short articles of professional interest and social interpretation. The division publishes in one of the numbers of the bulletin statistics relating to the institutions, agencies, and welfare services under its supervision. Special publications have been prepared from time to time, such as the following: Suggested Minimum Standards for Child-Caring Institutions, Child Placing in Ohio, Ohio Manual on Boarding Children in Private Homes, The Crippled Child, Minimum Standards for Day Nurseries in Ohio. Short pamphlets and dodgers of a popular nature have also been prepared for more general distribution.

An annual report is prepared by the department of public welfare, which includes reports of the various divisions and statistics from State institutions. Each institution or division of the department compiles the statistics relating to its service, and no plan has been made for statistical research under expert direction. The development of a research service which could assist in developing and analyzing the records of these administrative units and make the social information they contain available to the public would be of great value to the State.

The department employs all the usual devices for informing the public about its work, including newspaper articles, radio broadcasts, and addresses by members of the staff to groups throughout the State. Exhibits have been prepared for presentation at the State fair and the State conference of social work. The department also cooperates with the State conference of social work and the Ohio State University in an annual State conference of social work. A series of regional conferences were held in 1928, 1929, and 1930. The district welfare conferences held in 1930 included every county in the State. A fourth series of 14 conferences was planned for 1931 but these were given up, and the plan was not reinstated.

PERSONNEL OF THE DEPARTMENT

APPOINTMENTS AND QUALIFICATIONS

With the exception of the director, the chief of the division of business administration, the superintendent of charities, the secretary of the board of parole, and three other positions which the director may exempt from civil service by executive order, all members of...
the staff, including institutional superintendents and employees, are under the classified civil service of the State. The director of the department is appointed by the Governor with the advice and consent of the Senate. The chief of the division of business administration and the superintendent of charities are appointed by the director of the department. The director also appoints the members of the board of parole, subject to the approval of the Governor, but the board of parole appoints its own secretary.

Civil service throughout the State, counties, and cities was established in Ohio in 1913. The civil-service commission consists of two members appointed by the Governor, with the advice and consent of the Senate, for terms of 4 years. No qualifications are prescribed for these two commissioners except that they shall belong to different political parties and shall be "persons of recognized character and ability to serve." 90

The commission has made a practice of consulting the division heads when examinations are held to fill positions requiring special aptitudes and technical training. Sometimes the commission is aided in drawing up the examination. The three persons ranking highest in the examination are then certified for appointment. Examinations are held for promotions, and discharge can be for cause only, as tenure is defined as being during good behavior and efficient service. In all cases of removal the appointing authority must furnish the employee with a copy of the order of removal and with reasons for the action, giving him a reasonable time in which to make and file an explanation. There is also provision for appeal and hearing.

The civil-service classification of positions for the professional staff of the department of public welfare recognizes the need for special training and experience. For all supervisory and administrative positions in the division of charities, education equivalent to graduation from a college of recognized standing with specialization in the social sciences is required, except for lower supervisory positions, for which graduation from high school and 2 years' training in a school of social work will be acceptable if a longer period of professional experience is substituted. For case workers a similar educational background is desired, but graduation from a standard high-school course and 2 years of successful professional experience as a social case worker in an agency of recognized standing will be acceptable as a substitute.

The professional experience required of persons appointed varies with the degree of responsibility involved. Bureau chiefs must have had 5 years of successful professional experience with 2 years of specialized experience in case work, in institutional administration, or in orthopedic work, depending upon the type of work undertaken by the bureau. For institution inspectors and for supervisors 2 years of successful professional experience in social work in an agency of recognized standing are required. Experience in a child-caring agency is required of the supervisor in the bureau of child care. Professional experience is not required of case workers unless

91 General Code 1932, sec. 486-3.
it is offered in place of academic training. Civil-service requirements are weakened by the provision that for all positions "any other equivalent combination of education and experience" may be offered as an alternative.

The requirements also include certain general knowledge in a specified field as well as certain personal qualifications. Included with the requirements for positions in the classified service are qualifications for positions filled by appointment by the Governor or by the director of public welfare.

The qualifications of the staff of the department in 1934 varied considerably, although in general the positions were filled by persons well qualified by experience or education or both. It has been the custom to promote to more important positions persons who have served successfully in a minor capacity, with the result that many employees have served the department for many years.

Within the division of charities a real effort has been made to maintain high personnel standards. The superintendent in 1934 was formerly a member of the staff of the division and during the period between her former work there and her employment as superintendent she was for several years a member of the staff of the Child Welfare League of America. As a result she had wide knowledge of practices in other States and brought broad experience to the department.

With few exceptions the staff members were college graduates, several having had professional training in social work. Recent appointments to the staff were made from the training institutes that were carried on a few years ago, when college graduates were trained in the division and paid a small salary during the training period. The division has consistently encouraged staff members to undertake professional study whenever this was possible.

**SALARY SCALE**

Salaries within the department of public welfare have never been high. As there have been reductions during recent years basic salaries only will be quoted. The salary of the director of the department established by the administrative code is $6,500 a year, which corresponds favorably with the salaries of similar officials in other States and is the same as the salaries received by the directors of other State departments in Ohio. Salaries of some division directors are also established by the code. The superintendent of charities received $4,000 a year, which is reasonably comparable with the salaries paid similar executives in public and private agencies.

The salaries of staff members in the division of charities are low in comparison with the salary range recommended by the civil-service commission for these positions and for the responsibilities they involve. Two bureau chiefs received $2,800 a year and a third $2,100; four supervisors received $2,000 and one only $1,600 because the salary had not been raised when the worker was promoted from field agent to this position; three institution inspectors received $2,000 and a fourth $1,800; a social investigator received $2,200; one field agent received $1,800 and 12 received $1,600; the two nurses in the child-care bureau received $1,500 and the four orthopedic nurses.

---

General Code 1932, sec. 2220.
received $1,620; the two physicians who gave only part-time service received $1,200 and $960 respectively.

The civil-service commission recommended a salary range of $3,240 to $3,480 a year for the three bureau chiefs. No recommendation was made as to compensation of supervisors, but salaries for institution inspectors ranged from $2,040 to $2,400. For field agents, classified as social workers by the civil-service commission, salaries from $1,440 to $1,800 were recommended. Salaries of graduate nurses ranged from $1,320 to $1,680 and of orthopedic nurses from $1,560 to $1,920.

In spite of the low salaries there has been relatively little turnover among the members of the division staff. The three bureau chiefs had been in the division 13, 12, and 9 years, respectively, although one had served in the present capacity only about 5 years. Among the supervisors two had been with the division 14 years, one 10 years, and two 6 years. The institution inspectors had all had long terms of service—16, 14, 12, and 9 years, respectively. One field agent had been a member of the staff for 15 years, and three for 12 years. One nurse in the bureau of crippled children had been with the department 15 years, one 9, one 6, and one 5 years. The social investigator had served 15 years.
STATE SERVICES FOR CHILDREN

DEVELOPMENT OF LOCAL PUBLIC-WELFARE SERVICES

The division of charities is the State agency that has done most to develop satisfactory local welfare services. Under the board of State charities inspections were made and advice was given to local officials as to conditions in county and municipal homes (almshouses) and in county and municipal jails and workhouses. These institutions for adults were inspected regularly by the division of charities until 1933, but a reduced budget made necessary certain changes. One person in the division was available in 1934 for advice and consultation, but regular inspections had been discontinued.

The division is authorized to obtain statistics from officials granting aid to the poor but has no general authority for supervision of public relief. In 1930 a public-welfare consultation service was established and functioned until the spring of 1933, when a reduced appropriation caused its discontinuance. Studies were made of the relief situation in a number of the counties of the State and assistance was given in organizing the resources of these counties. During 1931, 51 municipalities, 23 counties, and 48 townships were visited in order to carry out the provisions of the Pringle-Roberts bill, which permitted political subdivisions to issue bonds for poor relief. This law placed upon the department of public welfare the responsibility for determining the need for such funds before a bond issue was authorized by the tax commission.

In 1934 the department of public welfare had no responsibility for the administration of unemployment relief. The division of charities had, however, cooperated closely with the State relief administration in the development of county programs. It had set up standards for personnel and had certified qualified workers for employment in county relief departments.

From 1925 to 1929 the division of charities through a bureau of probation supervised probation throughout the State for juvenile courts as well as for courts for adults. During this time statistics were obtained from the juvenile courts. With the creation of the division of probation and parole this bureau was discontinued. Although no organized work has been done with the juvenile courts since 1928, the division kept in constant touch with the courts through its services for State wards. The division had no responsibility for supervision of mothers' aid, which was administered by the juvenile courts, but close cooperation has been maintained with the State organization of mothers' aid executives, and statistics of mothers' aid have been reported by the courts.\textsuperscript{17a}

\textsuperscript{17a} It must be remembered that the statements in this report refer to conditions existing in Ohio in February 1934, when the Children's Bureau representative visited the State.

\textsuperscript{17b} Laws of 1925, p. 123 (General Code 1921, sec. 1871-11).

\textsuperscript{17a} Under the Social Security Act, Federal funds are made available to assist the States in the development of aid to dependent children, and Ohio is participating in this program.
The department of public welfare has had little responsibility for the county organization of welfare work. In 1921 a law was passed empowering counties to appoint county boards of child welfare to provide care for dependent children through placement in family homes or otherwise. This law supplemented the provision enacted in 1866 by which counties were authorized to establish county homes for children and provided that with the approval of the department of public welfare a county child-welfare board consisting of four members might be appointed when "in the judgment of the county commissioners the best interests of the dependent wards of the county will be subserved thereby." The law is permissive and is limited to child care. Its purpose has from the beginning been to furnish a substitute for county children's homes in counties where none existed or where it was desired to discontinue a home. Six counties had taken advantage of this legislation by 1934 and had organized county child-welfare boards. Four other counties were functioning under the provisions of the law regarding county welfare boards, although in these counties the board has continued to be known as the board of trustees of the county children's home.

The division of charities has in the past supervised the work of the county child-welfare boards through the institution and inspection bureau, but this supervision has become a part of the general district program. The division has stimulated the further development of these boards, because it has recognized that the development of local agencies for the care of children was essential to the State program if the State service was not to be overbalanced by its activities for direct care.  

Several proposals have been made during recent years for reorganization of local public-welfare services in Ohio. Some of these proposals have been presented to the legislature but have not been approved. All the plans proposed have had as their major purpose to consolidate under a county department of public welfare all relief functions, which are at present divided between the township trustees and the county commissioners. Another duty proposed for this department is the administration of county institutions and other welfare services. Most of the plans for a county department have been concerned solely with the consolidation of existing services and have failed to extend the responsibility of the county for services to children. The need for State supervision and for obtaining financial assistance from the State in order that counties with limited resources could employ qualified workers was not generally recognized in these plans.

CARE OF DEPENDENT CHILDREN

CHILDREN COMMITTED TO THE DIVISION OF CHARITIES

A law passed in 1913 gave the board of State charities, later known as the division of charities, authority to receive as its wards dependent or neglected minors and, when willing to receive them, delinquent minors also. In addition the board was authorized to

care for such children as it consented to receive by transfer from
district or semipublic homes or any institution entitled to receive
children from the juvenile court.

The original law provided for an extensive child-placing program;
all expenses for care were to be paid by the counties, but the State
was made wholly responsible for services. The State has continued
to accept children from the rural counties, but gradually the urban
counties are being persuaded to accept full responsibility and to pro-
vide care for children belonging to them. In Hamilton County (in-
cluding Cincinnati) and Cuyahoga County (including Cleveland)
the beginning was made by arranging that the county children's
agency carry the whole load of service and expense, although commit-
ments were made to the division of charities in order that county
money could be obtained for care through the usual channels. Later,
responsibility for the children was returned to the counties, thus
entirely relieving the State of more than 1,000 wards. In Lucas
County (including Toledo) the State was still holding commitments,
and service was maintained by the county, but the plan was to transfer
these commitments to the county within the near future. In four
other counties (Butler, Clark, Montgomery, and Trumbull) county
resources have been developed so that it has been possible to return
some 135 children to them. The result of the policy of pushing
responsibility back on the local public departments was a 43-percent
drop in the number of children under care from November 1929 to
January 1934. It was the hope of the division then that the new
plan for organization also would result in the development of addition-

Although the division may receive children on either temporary
or permanent commitments, the plan of 1934 was to use temporary
commitments for all children. These commitments must be renewed
every year if the children remain under care. For children placed
in permanent foster homes the division may eventually request a
permanent commitment. As this policy has not always been main-
tained, the department has found itself burdened with permanent
commitments, which apparently had to be carried until the children
became of age. A ruling of the attorney general, however, made it
possible to transfer permanent commitments as well as temporary
commitments to the counties.

In a few instances, when it is desirable for a mother to keep her
own children, the court may commit the children to the division of
charities in order that they can be given boarding care in their own
homes at the expense of the county. In two counties, Auglaize and
Belmont, there have been a number of such cases. Under these cir-
cumstances the staff of the division of charities makes a case study
like that made for children removed from their own homes and pro-
vides similar supervisory service.

Care on reception.

After a child has been committed, the usual procedure is to bring
him to the central office in Columbus for study. The division re-
ceives some assistance from the bureau of juvenile research in study-

Provided by the Maternal and Child Health Library, Georgetown University
STATE SERVICES FOR CHILDREN

ing its wards. The local social worker in touch with the family is expected to obtain as complete a medical-social history of the child as possible. This may be supplemented with additional history obtained by one of the division staff members. A complete medical examination is given, as well as a mental examination. If special medical or dental treatment is indicated, the child is usually kept in Columbus or nearby until the treatment has been completed.

For many years the division maintained a receiving home to which children were sent following commitment. About 1931 the receiving home was given up, but for a short time part of the boys section of the cottage of the bureau of juvenile research was made available for use as a receiving ward. However, at the time the representative of the children’s bureau visited the state (February 1934) foster homes were being used entirely for detention care of children. The division has developed for this purpose a few special boarding homes in which the rate of board paid is slightly higher than in the usual boarding home, although the homes are not subsidized. One home has been used entirely for older girls and another for older boys. All receiving homes are expected to take any child brought to them at any time of day or night. The division paid $1 a night when a child was in the home for a single night; 75 cents a night for two or three nights; and $5 a week for more extended care. This plan has proved to be very satisfactory and probably will be continued.

Placement follows the period of study. Different types of foster homes are used, as well as the child’s own home or the home of relatives on a boarding basis. On January 31, 1934, the division had 1,084 children under care as follows:

| In boarding homes | 348 |
| In free homes | 357 |
| In own homes: | |
| With financial aid | 108 |
| Without financial aid | 75 |
| In wage homes | 44 |
| In all other homes | 142 |

A revolving fund of $54,609, known as rotary fund A, provides for current expenditures until refunds are made by the counties, parents, or relatives. This would be ample if reimbursement were made promptly, but on January 31, 1934, the outstanding bills amounted to $56,720. Bills that were more than 3 months in arrears were placed on the “very delinquent” list and referred to the attorney general, who undertook to obtain payments. The division has refused to accept additional children from delinquent counties except in exceptional cases where the child may suffer if not received.

Special services

Medical care.—Medical care of children committed to the division has been given at the division clinic in Columbus, which is housed at the bureau of juvenile research. Two doctors, a man and a woman, were employed on a part-time basis. Each doctor held two clinic periods a week of about 2 hours each. Twice a year a special clinic is held for syphilitic children, when from 15 to 20 children are given a 10 weeks’ course of treatment. In addition to the initial examination at the clinic on reception a reexamination is required once a year. Small children in Franklin County, in which the division

Provided by the Maternal and Child Health Library, Georgetown University
Clinical care for children under care in the more remote sections of the State was largely limited to treatment for acute illness, but arrangements have been made to bring children from those sections to the clinic in Columbus during the summer vacation. Children living in communities having well-organized local clinics are not brought to the central clinic but to the local clinic. Two nurses have been attached to the central clinic. They arrange the clinic program for the day, assist the doctors during the clinic, follow up the doctor's orders, and direct the medical care of children boarded in Columbus.

A fee schedule had been established for medical treatment outside the clinic. At the time of this study, a doctor was paid $2.50 for house calls; an eye specialist received $4 for a refraction; dental care was paid for at the rate of $1.50 an hour; hospital care was paid for at ward rates; $15 might be allowed for operations for the removal of tonsils and adenoids, but other surgery was done as part of the regular service of the hospital.

Clothing.—A central clothing station has been maintained at the bureau of juvenile research, and clothing is sent out on the order of the worker in charge of the case. Whenever possible the division is expected to use clothing manufactured at the State institutions, but this plan has frequently proved impracticable. More and more the buying of clothing has become individualized, although some buying is done at wholesale houses. Material is sometimes furnished so that the foster mother can make the child's clothes. Older girls are taken shopping and allowed to have a part in the selection of their clothes. At the time this study was made the division was seriously considering the advisability of giving the foster mother a clothes allowance so that she might purchase the child's clothing. It was believed that this would be no more expensive than the plan then in use and would be more satisfactory both to the foster mother and to the child.

Supervision of foster homes

Foster homes are carefully selected. A family desiring to take a child is required to fill out a formal application blank, giving general information about the family situation. The home is then visited and additional information obtained about it according to the following outline:

Foster-home investigation

I. Application. Source and object.
II. Clearing-house report. Record of existing data of other agencies.
III. Directions for reaching home.
IV. Home investigation.
   1. Community: Size and type of town; churches, schools, recreation, clubs, libraries, sanitation and health, industrial conditions.
   2. Neighborhood: How thickly settled; type of homes; type of neighbors; any desirable or undesirable features. Distance from church and school.
   3. House:
      A. Exterior: Condition, type, porches, screens, size and condition of yard; outhouses; order and cleanliness; livestock; water supply.
      B. Interior: Number and arrangement of rooms. Heating, lighting, ventilation, cleanliness, neatness, sanitation, furnishings, taste, pictures. Description of room child will occupy.
4. **Family:**
   - **Man:** (Should be seen personally.) Date of birth, birthplace, nationality, home as a boy, religion, personal appearance, education, intelligence, personality, health, habits, occupation, marriages, present and previous, verified. Interest in taking child.
   - **Woman:** Maiden name. (Same data as for man.)
   - **Children:** Age, sex, education, intelligence, personality, habits, attitude toward another child in the home.
   - **Other members of household:** Name, age, sex, occupation, health, intelligence.

5. **Finances:** Income, rent, insurance, mortgage.

6. **Health:** Past and present of each member of family.

7. **Interests:** Church and club activities, community interests, standing in community.

8. **Child:** Age, sex, type desired, foster parents' motive, plan for child.
   - Interest and experience with children.

9. **General impression of community:** Home and family, standing of family in community, social life, clubs, atmosphere of home.

V. **Report of interview with independent references—at least three (doctor and pastor should be seen personally).**

VI. **Recommendation for use of home.**

VII. **Approved or disapproved.**

VIII. **Running record of subsequent use of home.**

A real effort is apparently made to find the type of home best suited to care for the particular child in question. A few homes have been put to special purposes. At the time of this study one foster home cared for venereal cases, and another accepted feeble-minded children of imbecile grade. All boarding homes used by the division are properly licensed and are of course subject to the boarding-home regulations prescribed by the division of charities. So far as practicable children are placed in homes of the same religious faith as their parents, but there are a few exceptions when other interests seem paramount to the religious one.

The usual amount paid for boarding-home care was $4 a week in 1933, with a minimum of $2.50 to $3 in the rural sections and a maximum of $10 for difficult cases. At one time $15 a week was paid for the care of one feeble-minded child who was too young to be sent to a State institution, and $18 a week was paid for one tubercular child. During the last 6 months of 1933 an average of slightly more than $8,000 a month was paid for boarding care.

The division endeavors to visit every child within 30 days after placement. The law requires a minimum of only two visits a year, but when this study was made the practice of the division was to make at least four visits each year. In the central district, where the majority of the children having special problems are placed, more frequent visits are made. Every effort has been made to build up friendly contacts with the foster parents so that they may have a sense of responsibility toward the child closely approaching that of natural parents.

The division may consent to the adoption of children committed to its permanent guardianship but has insisted that a child be in a home for 2 years before adoption. From 1915 to 1934, 434 State wards were adopted. One final visit is usually made after adoption before the case is closed in the division.

---

40 General Code 1932, sec. 1352–3.
In the past a detailed outline was used to report official visits made to children, but this has been discontinued. However, at the time of this study it was still the practice to make a more extensive report of special visits than of incidental contacts, although the latter were always recorded. Reports of visits are written up in narrative form. School reports made by the child's teacher on blanks prepared for this purpose supplement the narrative report. Complete records of preliminary investigations made of foster homes and of supervisory visits have been kept by the division. An accurate daily census and daily information of the whereabouts of children under care are always available. The annual report of the division contains a summary of the statistical information gathered during the year.

CHILDREN COMMITTED TO THE SOLDIERS' AND SAILORS' ORPHANS' HOME

The soldiers' and sailors' orphans' home, although officially regarded as an educational institution, may accept children from infancy to 18 years of age and may care for them during 12 months of the year. Out of its population of 671 in 1933, 615 were at the institution for the full year. The institution is administered by a board of five trustees appointed by the Governor, with the advice and consent of the senate. These trustees serve without remuneration and are expected to attend regular board meetings for at least 2 days each month. The board employs the superintendent, who administers the affairs of the institution. The law provides that no person shall be eligible for the position of superintendent unless he has been in the military or naval service of the United States and has received an honorable discharge. The appropriation for the institution in 1934 was $263,662.

In the past the institution suffered materially as a result of political interference and domination, but at the time the study was made it seemed relatively free from this. The report of a survey made by the bureau of educational research of Ohio State University in 1932 includes the following statement:

It is a source of gratification to the members of the survey staff to discover no indication of political considerations in the present administration of the home. Close study of the activities of the board indicates a serious desire to do the best for the children under its care. The minutes of the board and records of its activities indicate that its meetings are conducted in a business-like way, and that the welfare of the institution is uppermost in the mind of each board member.

On the advice of the survey staff an assistant superintendent in charge of education replaced the superintendent of schools in the institution. This assistant superintendent ranks next to the superintendent of the home. His duties are primarily educational, yet he has the opportunity to coordinate every facility of the institution. A supervisor of academic education and a supervisor of vocational education are also employed and are directly responsible to the assistant superintendent.

Not until about 1933 was there a recognition of the need for a well-developed social-service program in this institution. It had been an

Provided by the Maternal and Child Health Library, Georgetown University
accepted tradition in Ohio that the children of ex-service men should be accepted by the Ohio Soldiers' and Sailors' Orphans' Home merely upon presentation of proof that the father is or was a veteran. The administration, however, recognized that children should be accepted only after careful case study to determine whether or not institutional care was necessary. At that time the social-service department consisted of a supervisor and two assistant social workers.

The division of charities includes the soldiers' and sailors' orphans' home in its program of supervision. Regular visits to the institution have been followed by recommendations to the board of directors. For a time the division refused to license the institution, but this meant very little, as appropriations continued and the institution merely operated without a license.

STATE SUPERVISION

The responsibility of the State for the protection of children under care of public and private agencies was recognized in 1913, when a law was passed requiring the annual inspection and certification by the board of State charities of every benevolent or correctional institution, corporation, and association, public, semipublic, or private, that receives or desires to receive and care for children, or places children in private homes. The only foster-care service for children that has not been included under this supervisory plan is the placement of children in family homes by the juvenile courts. A few years earlier (1908) the board of State charities had been authorized to pass annually upon the fitness of all associations receiving or desiring to receive children from the juvenile court and to supervise and inspect such associations. Provision was also made in the 1908 law that all articles of incorporation must be submitted to the board for its approval if the association desiring incorporation cared for dependent, neglected, or delinquent children, and in 1913 this provision was extended to include agencies placing children in private homes.

In 1920 additional protection was afforded children receiving care outside their own homes, through the passage of the boarding-home act. According to this law every home boarding a child for hire, gain, or reward, regardless of age, was required to have a certificate from the board of State charities.

In the administration of these laws the division of charities has from the beginning considered that supervision involved much more than mere inspection. The program has been a constructive one that has continually stimulated child-caring and child-placing institutions and agencies to adopt high standards of care.

Approval of incorporation.

The secretary of State is required to refer all applications for incorporation to the division of charities when the purpose of the association includes child care or child placing. In its investigations the division undertakes to determine:

1. Whether the incorporators are reputable and respectable persons.
2. Whether the proposed work is needed.

Provided by the Maternal and Child Health Library, Georgetown University
3. Whether the incorporation of such association is desirable and for the public good.

Within the past few years there have been fewer applications for incorporation, but a careful investigation has always been undertaken either by a member of the State staff or by a recognized local agency in the community where the new association is to function. During the time the division of charities has had a part in incorporation, it has always attempted to conserve the interest and enthusiasm of all responsible groups applying for incorporation, even when it was not possible to approve the original proposal. The policy has been to suggest other possibilities of service, which might include the support of existing agencies or the creation of a more necessary service than the one proposed.

Supervision of institutions and agencies.

In 1934 there were 181 certified child-caring institutions and associations in Ohio, including 27 day nurseries. It has been the general policy of the division of charities to make an annual visit to each of these agencies. A new policy was inaugurated in Cincinnati in 1931. On consultation with local organizations it was decided that a group discussion of common problems would be more practical than individual visits to institutions. This plan was successful and it was anticipated that in the metropolitan district created in 1934 routine supervisory visits to institutions and agencies by the State staff could be reduced, and certain responsibility shifted to a local group in each city, which would have a vital interest in promoting adequate standards.

A health specialist has worked intensively with the staff of the institution-inspection bureau since 1920. Although it is difficult to know just how much this worker has been responsible for improved health standards in the children’s institutions and agencies, it is certain that she greatly stimulated the introduction of preventive health measures in the child-caring agencies. Finding that regular medical examinations were almost nonexistent in many institutions in the State, she offered to assist the doctors in giving such examinations. As a nurse she was professionally acceptable to the medical profession and was also able to evaluate to some extent the doctors’ methods. After these demonstrations of medical examinations the institution sent to her reports of subsequent periodical examinations, which were checked and returned with suggestions. A self-grading system was worked out by which institutions and agencies evaluated their own services. Health was made an interesting and challenging subject, and the printed or mimeographed material that was sent to the institutions kept the subject alive and active.

The division of charities furnishes the institutions and agencies with filing cards on which is entered certain identifying and statistical information with regard to the children under care. A register is also furnished on which a daily count can be kept of the number under care at the beginning of the day, the number received, and the number discharged during the day. A duplicate copy of the daily count is sent to the division of charities. For day nurseries, the Ohio Soldiers’ and Sailors’ Orphans’ Home, and a few other institutions, this duplicate daily count is all that is required. Some agencies, including those with high standards and adequate records, send only a monthly summary, which gives certain counts but no
information about individual children under care. However, many agencies are required to send a detailed monthly report, which includes the information entered on the file card. From these reports the division of charities makes up individual cards for children under care of institutions and agencies. County children's homes are also required to send in annual reports giving certain financial details that are not included in the monthly reports. The placement work of agencies has been studied through records, conferences on cases, visits to boarding homes, and occasional visits to other foster homes.

One interesting feature in the Ohio law is the provision that any person who receives children or receives or solicits money for an institution, corporation, or association not properly certified shall be guilty of a misdemeanor and fined not less than $5 or more than $500. In spite of the fact that it has not always been possible to enforce this provision it has proved very helpful as a check on soliciting, especially by agencies from outside the State, and the metropolitan areas particularly have been enabled to prevent unqualified agencies from operating.

**Supervision of maternity hospitals.**

Licensing and inspection of maternity hospitals in Ohio is the responsibility of the State department of health. During the year 1932, 194 maternity hospitals were licensed, of which 19 were hospitals established primarily to care for unmarried mothers. Inspections have been made by a nurse who is mainly interested in the physical aspects of the hospital. No special attention is paid to social policies, although every hospital is expected to keep a record of every child who has gone from the hospital to an adoptive home and to abide by the provision that prohibits the placing out of children under the age of 2 years without the written consent of the division of charities or commitment by the juvenile court.

The department of health is required by law to furnish each maternity hospital a record book for registration of maternity cases, which contains forms for entry of medical and personal history of the mother and child. The record book also contains the laws of Ohio relating to maternity hospitals and the regulations adopted from time to time for the conduct of such hospitals. A skilled social worker could obtain valuable social information from these records if they were completely filled out. No plan has been made in the past for utilizing this information, however, and no effort has been made to obtain the assistance of the staff of the division of charities in planning a program for unmarried mothers in the maternity hospitals.

Some maternity hospitals in the State are certified as child-caring agencies and therefore are visited by the division of charities. It has been the policy of the division that maternity hospitals should not act as child-placing agencies and at the time of the visit to Ohio none were so certified.

**Supervision of boarding homes.**

Before 1920 when the boarding-home law was passed and the State department assumed definite responsibilities with regard to...
standards, licensing, and the development of boarding-home care over the State, only one agency in addition to the State department was using boarding homes. Ten years later (1930) 50 agencies, institutions, and courts were placing children in boarding homes. It is probable that this tremendously increased use of boarding-home care can be attributed largely to the high standards set by the State department for homes licensed to board children.

From the beginning the division of charities realized that it must delegate part of its authority for boarding homes if it was to obtain satisfactory results without the employment of a large State staff. Accordingly in some counties local social agencies have been delegated as boarding-home agencies with full authority to make recommendations regarding licenses and to supervise boarding homes, not only in the counties in which they are located but also in adjacent counties. Independent homes in which children are placed by their parents or other persons are also referred to the supervisory agencies when the homes are located in the area under their supervision; otherwise these homes are the responsibility of the division of charities.

Before 1933 a special worker in the division visited boarding homes under the supervision of the State, but under the reorganization plan the boarding homes are referred to the district secretaries, who will assign them according to location to the district workers for investigation. The district secretary makes the decision as to licensing, but the actual licensing procedure is left to the boarding-home clerk in the State office. This clerk is responsible for issuing licenses and for sending notifications as to annual renewals of licenses. During 1933, 2,202 homes located in 66 counties received licenses.

Individual records have been kept in the State office for each boarding home. These include the "license report", which is made after the initial investigation, as well as a duplicate of the detailed report made by the agency. The following outline was used in investigating boarding homes:

1. Application: Source and object.
2. Clearing house (record of existing data of other agencies).
3. Directions for reaching home.
4. Home investigation: (a) Community; (b) neighborhood; (c) house (exterior, interior).
5. Family: (a) Men; (b) women; (c) children; (d) other members of household.
6. Finances.
7. Health (past and present of each member of family).
8. Interests.
9. Child (age, sex, type desired, foster parents' motive, plan for child, interest in and experience with children).
10. General impression.
11. Independent references.
12. Recommendation for use of home.
13. Approved or disapproved.

A few agencies that have high standards have been exempted from sending reports of investigations, because of the large number of boarding homes used. A license report is required of all agencies, however, on which additional information is given when no report of investigation is made. A supplementary report of the home is required annually before the license is renewed. This report
is in the nature of an evaluation of the home for the year. The following points were included in this report:

2. Names and ages of children boarding in home; date of placements.
3. Physical care (health; sleeping arrangements, including time of rising and retiring; cleanliness; clothing; diet).
4. Education, recreation, and moral training (church and school attendance, religious training in the home).
5. Analysis of foster family.
6. Recommendation for future use (type of children for whom adapted; when home will be available for another child).
7. Decision (home approved, disapproved, or withdrawn by foster-home committee or supervisor).
8. Relicense date: Number, age, and sex of children for whom certified.

Boarding houses operating independently of any child-caring agency are required to make a report to the supervising agency or, if there is none, to the division of charities whenever a child is received or discharged. Supervising agencies do not make individual reports of children but send in a monthly report showing the status of the boarding homes in the area served by the agency.

The division of charities takes the responsibility for notifying an applicant for a license when the license has been disapproved. Insofar as it is possible, persons conducting homes not suited to be boarding homes for children are persuaded to give up this work. If this method fails the cooperation of the prosecuting attorney is obtained to warn the persons operating the home when they seem inclined to ignore the fact that they are forbidden to operate without a license. The division of charities has rarely found it necessary to prosecute under the boarding-home law, but occasionally local agencies have instituted prosecutions.

The first standards for boarding homes in Ohio were drafted by the State department in 1921 and submitted to a few selected agencies before their adoption. Later a State advisory committee on boarding homes was formed in order that the division might have the benefit of the experience and knowledge of the committee in arriving at standards and policies for the administration of boarding homes throughout the State. Two meetings of this committee held in 1929 resulted in rules and regulations applying to all agencies placing children in boarding homes.

Local foster-home committees have been used with great success in a few communities. Such a committee is composed of a representative from each agency investigating boarding homes in the county, a physician or a nurse from a supervising health organization, and representatives from such agencies as the juvenile court, the council of social agencies, the community welfare federation, or any agency that the committee members vote to have represented. This committee reviews applications of foster homes for State licenses and makes recommendations to the division of charities as to final action. The committee is also expected to act as sponsor for community educational projects in the value of foster-family care; to study and seek to improve methods and procedures in home finding and investigation of foster families; to formulate principles evaluating foster-home care; and to study matters pertaining to family life of the placed-out child. The State department has sug-
suggested that a definite part of these committee meetings be devoted
to a discussion of principles and plans for boarding homes, in addition
to the time given to considering individual homes for licenses.

SERVICES TO SPECIAL GROUPS

Adoptions.
The department of public welfare has no general responsibility for
adoptions, but the court may designate it as "next friend" to the child
in order that it may give consent to adoption when there is no legal
guardian. When the division of charities is so designated, its duty
is to verify the allegations of the petitioner and to make inquiry in
order to determine whether the proposed foster parents and their
home are suitable for the child and whether the child is a proper
subject for adoption. During 1932–33 eight cases were referred for
"next friend" investigations.

Children born out of wedlock.
The census reports show approximately 2,400 illegitimate births in
Ohio annually, but social responsibility for mothers and children is
left almost entirely to local agencies. According to the law the ju-
venile court may commit an unmarried mother to State guardianship
if she is under 18 years of age or if she is under 21 and has pre-
viously been made a ward of the court, and may commit the baby also
if it is believed to be for the best interest of the child. No informa-
tion was obtained as to the number, but such commitments are not
usual. One worker in the division has given the major part of her
time and attention to unmarried mothers, whether or not they have
been officially referred to the department. During 1933, 95 unmar-
rried mothers were referred to the division for assistance. Fifty-nine
of these were assigned to the special worker in the division and 36
to the districts. Seventy-three cases out of the group were still active
in 1934. Most of the cases referred represented mothers received for
care at the maternity hospitals in Columbus, although individuals
and other social agencies occasionally called upon the division for
help in making plans for a mother and her child.

CARE OF DELINQUENT CHILDREN

INSTITUTIONAL CARE

Two state institutions for delinquent children in Ohio are admin-
istered by the department of public welfare. The boys' industrial
school had an average daily population of 837 for the year ended
December 31, 1934, and the girls' industrial school, 384. Boys and
girls from 10 to 17 years of age, inclusive, may be committed to these
institutions by the juvenile courts of the State. Commitments are
usually for 1 year, although guardianship may continue until a boy
or girl reaches the age of 21. The length of the stay in the institu-
tion is also affected by parole policies, which differ somewhat in the
two schools. Unsatisfactory behavior in the girls' industrial school

adds to the length of commitment, whereas good behavior at the boys' industrial school takes time off the year for which a boy has been committed.

Each superintendent has sole responsibility for the program of the school under his charge and for the methods of discipline and training that are used. No provision has been made for advisory service to the schools, except in institutional administration, although some assistance in special projects has been given by other State departments and by the division of charities and the bureau of juvenile research. The academic work done in the State institutions follows the school system of the State and is approved by the department of education. The bureau of juvenile research supervises the work of the psychologists serving the schools, who have been considered to be on the staff of the bureau although their salaries were paid from school funds. In addition, some of the research projects undertaken by the bureau have involved close cooperation with the schools. The division of charities has also cooperated with both schools at various times in providing service for children. An illustration of this was the division's acceptance of guardianship and supervision of homeless boys who needed placement in foster homes on release from the institution. This service was carried out for a short time only, as reduced appropriations necessitated a reduction in the staff of the division.

Each school conducts its own parole work. Recommendations for parole are based largely on time served in the institution as affected by the credit system for good conduct. Recommendations are sent to the director of the department of public welfare, who has the final decision in the matter. At both schools the parole staff has been inadequate, with the result that visits cannot always be made to the home before a child is released and that intensive parole supervision is impossible because of the large case loads carried. The length of parole varies, as the superintendent of each institution determines when a child's parole shall be terminated.

OTHER SERVICES FOR DELINQUENT CHILDREN

There has been no close integration of State services for delinquent children, such as might have developed under the central administration of services for children that was proposed by the joint committee on economy in the public service in 1929. The State industrial schools have called upon the juvenile courts for assistance in making investigations, but no definite program has been developed for extending parole services through the assistance of local agencies. The bureau of juvenile research has made a few studies in the delinquency field, but no comprehensive research projects have been undertaken.

Although the department of public welfare has had general responsibility for supervision of probation and parole since 1925, and a division of probation and parole was created in 1929, there has been practically no State supervision of juvenile probation or of the work of the juvenile courts. Detention homes were included in the institutions visited by the division of charities for a time, but such visits

---

Provided by the Maternal and Child Health Library, Georgetown University
were discontinued because of the antagonism of the courts to supervision that in any way interfered with the court's prerogatives. Under the law the department may require reports from probation and parole officers\(^6\) supervising children, but this has not been done, since responsibility was removed from the division of charities.\(^6\)

**CARE OF MENTALLY HANDICAPPED AND PROBLEM CHILDREN**

**INSTITUTIONAL SERVICES**

Ohio has three institutions for the feeble-minded and one for the epileptic. Ohio stands sixth among the States in the number of feeble-minded and epileptic persons in institutions (10.5 per 10,000 of the general population in 1932). No figures were available showing the number of children in the three institutions or among the approximately 1,500 persons on the waiting list, but institutional facilities for mentally defective children were known to be inadequate. Superintendents of the institutions have refused to admit children under 6 years of age, and it has therefore been necessary for the division of charities to accept a few of these children for care. Formerly such children were committed to the division as dependent, but the plan in effect in 1934 was to have them declared feeble-minded by the probate court and then assigned to the division until such time as they could be admitted to one of the institutions for the feeble-minded. In February 1934 the division had 17 such children under care. Formerly the division continued to carry as active the cases of children who had been committed to it and were later transferred to the institutions for the feeble-minded, but a ruling of the attorney general has made it possible to discharge this group after admission to the institution.

No parole facilities for the feeble-minded have been developed, and no supervision was being provided for the 1,480 persons whose names remained on the books of the institutions at the end of 1932 and who were away from the institutions. A study of the institution populations was contemplated in the hope that some of the persons in the institutions might be released, making it possible to admit persons from the waiting list. However, until provision is made for continued supervision of paroled feeble-minded persons by State or local agents the possible success of an extensive parole program seems doubtful.

The State has accepted no responsibility for aiding school districts to maintain special classes for the subnormal, nor does it provide any special supervision through the department of education of such classes as have been established by local communities. Despite this fact 26 cities of population ranging from 2,500 to more than 100,000 reported special classes for the mentally handicapped in which 5,760 children were enrolled in 1933–34.\(^6\)

\(^6\)General Code 1932, sec. 1871–1; Laws of 1925, p. 426.

\(^6\)Through the cooperation of the Ohio Institute, the Ohio Probation Association (a voluntary group composed of probation officers and juvenile-court judges) has been enabled to carry on an active program, which has had as its purpose the raising of standards of work of the juvenile courts of the State and the building up of a spirit of cooperation among agencies that deal with children in trouble, to the end that the court should be used only as a last resort.

Examination of children who are considered mentally deficient or who have had conduct difficulties is made by the bureau of juvenile research. The bureau maintains a home in which children may be kept for study, which is known as the cottage. The cottage has a capacity of 120 (70 boys and 50 girls), but the usual population is less than 100. There were 85 children in the cottage on the day the Children's Bureau representative visited it. Admission is usually limited to children from 5 to 18 years of age.

The bureau classifies its services as of three types:

(1) Cottage service: For children sent to the cottage and held for observation during a period of 3 weeks to 6 months.

(2) Central clinic service: For children attending the regular clinic held twice a week at the bureau (before 1933 about 12 children could be examined at each clinic).

(3) Field services, which include:
   (a) Work at the State institutions for children.
   (b) School clinics held on request of school officials to examine children recommended for special class instruction.
   (c) Clinics conducted in different counties to serve the juvenile courts.

Because of a reduction in staff all field clinics were discontinued during 1933, and only one weekly clinic was held at the bureau, which provided for the examination of not more than six children a week. During the fiscal year ended December 31, 1933, a total of 723 children had been examined by the bureau staff. This was a 79-percent decrease from the number examined in 1931, when 3,670 children were seen at the field clinics. Of the 723 cases, 451 were cottage cases and 272 were clinic cases.

Children are sent to the cottage in one of three ways: (1) By commitment from the juvenile courts, which during 1933 committed 320 children to the bureau for observation; (2) by referral from children's homes, social agencies, public and private schools, and parents or legal guardians (104 cases in 1933); (3) by transfer from State institutions and agencies under the administration of the department of public welfare (27 cases in 1933).

Seventy-one counties made use of the cottage and clinic facilities in 1933. All commitments to the bureau are temporary, and when study of the child is completed he is returned to the court making the commitment with recommendations for future treatment, which may include commitment to the division of charities. No charge is made to the counties for services or maintenance, although the statute permits it. Because of the excessive demands made on the bureau by Franklin County, in which it is located, and by a few other adjacent counties, a quota system was being considered. This would make possible a more equitable distribution of service throughout the State.

Each child admitted to the cottage is given a complete medical examination, with routine laboratory tests. Children with venereal diseases are given treatments, and minor illnesses are cared for at the cottage hospital, but no surgery is attempted. If surgical treatment is necessary before the problems of a child can be properly diagnosed, the child may be sent to a local hospital, but otherwise the bureau only recommends the surgical treatment indicated by the examination and leaves the actual treatment to the agency which
has referred the child for examination. The Columbus State Hospital for the Insane has occasionally been used for additional study of children who have psychoses or nervous diseases.

Psychometric tests are given to every child to determine his intellectual ability and stability, and personality studies are made to determine the attitudes of the child and to evaluate the effect of past experience.

Children received as "cottage cases" are housed in a modern fireproof building with two wings, one for boys and the other for girls, under the direct supervision of workers who, although not trained persons, are supervised closely in their handling of the children by the cottage supervisors and the bureau staff. The supervisors of the cottage submit reports at least once a week concerning the behavior of each child, and outstanding changes in behavior are reported immediately. Such information is placed in the permanent case record of the child for the use of the medical and psychological staff. In addition, members of the staff visit the cottages and observe at first hand the reactions of the children under various circumstances.

At the time of this study the program of activities for the children was decidedly restricted. No regular school work was provided, nor was there a well-organized recreation program. The children helped with the household tasks and of course spent much time under observation of the bureau specialists. Their free time was spent under the general supervision of the cottage supervisors in free play on the playground or in the rooms assigned for this purpose in the cottage.

The bureau undertakes no social service directly. Every agency referring a child is expected to send in advance of the child's admission a complete social and personal history prepared in accordance with an outline adopted by the division of charities, the girls' industrial school, the boys' industrial school, and the bureau. Upon the completion of the study the child is returned to the agency with recommendations, and the responsibility of the bureau ceases.

In a few instances the bureau has given psychological tests to adults, but only in connection with a child who is being studied. No mental-testing service is available in the rural districts, except when special examiners are called in by the probate court for particular cases.

CARE OF PHYSICALLY HANDICAPPED CHILDREN

CRIPPLED CHILDREN

A sincere and active interest in crippled children has been maintained in Ohio since 1919, the year that marks the organization of the Ohio Society for Crippled Children and the passage of the act authorizing the board of State charities to make provision for the care, treatment, and education of dependent crippled children committed to it by the juvenile courts of the State. An amendment to this law in 1921 provided that the expense of care, treatment, and education be referred to the county from which the child was committed. According to the law, application for care, treatment, and education must be made to the juvenile court, which decides upon the need for care and the ability of the parents to provide suitable medi-

---

Provided by the Maternal and Child Health Library, Georgetown University
cal and surgical treatment. If the court finds the child in need of
treatment by the State, it may then commit the child to the division
of charities for the period necessary for treatment. The commitment
can be renewed annually over a period of years if the child's condition
warrants continued care.

Until 1929 the work for crippled children was carried on as a func-
tion of the child-care bureau, but the steady growth of this work
made it desirable to have a separate bureau for crippled children,
and this was accomplished in the reorganization of the division. In
1934 the crippled children's bureau was directed by a registered nurse
with special orthopedic training. A staff of four registered nurses
was employed. Although only one of these had orthopedic training,
all were public-health nurses who had been in the service of the
bureau for many years and understood thoroughly the needs of
crippled children.

A professional advisory committee composed of five orthopedic
physicians from the various cities of the State was appointed by the
department soon after the work for crippled children was started.
These men serve without pay and are appointed for indefinite terms.

It was necessary for the advisory board to meet more frequently
when the work was new than it did later. New policies are still
referred to it. The advisory board gives advice, about brace shops
and hospitals and about unusual operations needed by the children
and passes upon the qualifications of physicians applying for recogni-
tion as orthopedists.

All State work for crippled children is carried on by approved
physicians, and the hospitals used by the crippled children's bureau
usually have an approved orthopedic surgeon as a member of the
staff. In 1934, 33 orthopedic doctors and 31 hospitals in various
sections of the State were treating children committed for care.
Accepted hospitals must be well equipped to care for orthopedic
cases with such necessary equipment as sun porches, physiotherapy
departments, and special wards for children.

Under a well-planned system the bureau of crippled children
receives information of the whereabouts of children needing its serv-
ices. School enumerators are required by law to report on a special
list crippled children between the ages of 1 and 21. A duplicate
copy of the list of crippled children that is sent to the superinten-
dent of public instruction must be sent to the judge of the juvenile
court, who in turn is required to send a copy to the health commis-
sioner of each health district in his county. It is then the respon-
sibility of the health commissioner to have an examination made of
each crippled child on the list within 60 days and to make a report
to the State department of health and the judge of the juvenile
court. Provision has also been made for registration on the birth
certificate of any deformity apparent at birth. In addition to these
sources of information the nurses from the crippled children's bureau
attend the orthopedic clinics held at the general hospitals throughout
the State. Public-health nurses in the local communities cooperate
closely with the bureau and report cases known to them, in addition

---

Provided by the Maternal and Child Health Library, Georgetown University
to assisting in general educational work. As a result few children needing special care fail to receive assistance.

After commitment to the department of public welfare a child is placed under the care of one of the selected orthopedic surgeons, preferably the one who first examined him, who places him in one of the approved hospitals, usually the one nearest his own home, and assumes charge of the case. When hospital treatment is no longer necessary, the child may be sent to a convalescent home or to a well-selected boarding home, or returned to his own home.\footnote{General Code 1932, sec. 1352-8.}

Follow-up work after the child leaves the hospital is conducted by local public-health nurses under the direction of the staff nurses from the bureau. The State has been divided into districts, each with a staff nurse in charge. As each nurse had, in 1934, more than 300 children under her supervision, it was essential to have close cooperation with the persons caring for the child as well as with the local health nurses. Home visits are made on the average of every 3 or 4 months.

All expenses for care, treatment, and appliances were paid from a State revolving fund, rotary fund B, which in 1933 was $50,000. Counties have been slow with their reimbursements, however, so that on February 1, 1934, there was $63,916.56 outstanding on the "very delinquent" list. It was not unusual for parents to pay all or part of the expense for care, but such payments were made to the counties instead of the State and no record of the amount so received was available. During 1933 a total of $242,530.19 was expended through the department of public welfare for care and treatment of crippled children. The entire cost of administration was paid from the appropriation to the division of charities.\footnote{Under the Social Security Act, Federal funds are made available to assist the States in the development of services for crippled children, and Ohio is participating in this program.}

The attitude of the bureau is well expressed in the following excerpt from one of its reports:

From a purely business standpoint every effort should be made to give these crippled children the advantage of the most skilled medical and surgical treatment and of the best educational advantages in order to make them self-supporting men and women instead of helpless dependents and objects of pity. The crippled child today is treated as the normal child is treated. He is made to feel independent and that he must prepare himself for some vocational work for a livelihood. We are trying to discourage the idea that there is nothing for him to do in life but to sell pencils on the street, or beg, and to feel that the world owes him a living.\footnote{The Crippled Child: the Ohio Plan for Care, Treatment, and Education, p. 17. Division of Charities, Department of Public Welfare, Columbus, January, 1931.}

The number of children received for care under the provisions of the crippled children's law had reached 4,683 by February 1, 1934. Of these 3,157 had been discharged, leaving 1,526 children under care.

Close cooperation is maintained between the division of rehabilitation of the State department of education and the crippled children's bureau. Practically all children are referred to the division of rehabilitation at or before the time of discharge. The rehabilitation department prefers to have the names of crippled children before their graduation from high school, but the completion of a high-
school course is considered an important prerequisite to vocational training.

Generous provision has been made for special classes for the physically handicapped in Ohio. In the school year 1933-34, 31 cities had special classes for crippled children in the city school systems. This is about one-fifth of the total number of cities in the United States that had such classes. In 7 of these 31 cities and in 1 other city, classes were also conducted in hospitals. For that school year the enrollment of crippled children in classes of city school systems was 1,208 and in hospital classes 1,043, making a total of 2,221. In addition more than 300 crippled children received instruction at home during the school year. When it is impossible to transport children from their own homes to special classes the department of education may pay board for them in a home near the class.

In order to have a special class there must be eight children in the school district needing such provision. The State is then authorized to pay as much as $300 a year more than the cost of education in regular school classes for each child in such special classes. The average per-capita cost of educating a crippled child in 79 cities of the United States in 1931-32 was found to be about $200. For the biennium 1931-33 the Ohio State Department of Education paid the school districts about $15 a year for each child in the special classes, but there was a possibility that the legislature might make a supplementary appropriation sufficient to permit additional payments up to the $300 limit. For children attending special classes outside the school district in which they live, the home district pays the usual cost of education and the outside district receives the State grant in aid. In one county (Tuscarawas) a county class for crippled children has been organized.

BLIND CHILDREN

In 1934 the Ohio Commission for the Blind had four nurses whose major duty was the prevention of blindness. The nurses promote clinics for eye examinations when the situation in any community seems to warrant such action. The commission nurses work closely with the department of education in the organization of Braille and sight-saving classes.

Day-school work for blind and partially blind children in Ohio has been outstanding not only because of the extent to which special classes have been provided but also because of the high standards attained. In 1933-34, three Ohio cities had Braille classes in which 45 persons were enrolled, and 25 cities had sight-saving classes in which the enrollment was 943. These classes were supervised by the assistant director of the division for the physically handicapped in the department of education and by two supervisors, one from the Cincinnati school system and one from the Cleveland school system, who gave part of their time to State supervision. It was felt that by this practice the work throughout the State had been greatly

unified and the city classes received the same type of supervision as classes in the smaller centers. In two counties (Greene and Ottawa) county unit classes have been organized. State regulations for organization of these classes and for grants in aid for their support are identical with regulations for crippled children, although for the whole United States the average cost of educating a blind child in a special class is about $550 a year. The cost for a partially-seeing child has been found to be about $200. In Ohio the State per-capita cost for educating a blind child was $110.70 in 1933-34, plus a local cost of approximately $55 per child, making a total of $175.70.

The residential school for the blind in Ohio was established in 1837 and was the first State school for the blind in the United States. Administration of this school was transferred from the department of public welfare to the department of education in 1927. By this action all education for blind children was brought under a single administration. A closer relationship between the institution and the day-school program for the blind seemed desirable. The capacity of the State school for the blind is 260, and the enrollment for the school year 1933-34 was 230. The per-capita cost of $600 for education and maintenance was met entirely from the annual State appropriation of $127,500 in that year.

DEAF CHILDREN

Special class facilities for deaf children have lagged behind those for blind children. The legal provisions for these classes are much the same as those for crippled and blind children. State aid for deaf children is limited to $300 per child for the school year. Only 15 cities had special classes for the deaf; the enrollment in such classes was 472 in 1933-34. Two of these classes were county units. The slow development of these classes may be due to the fact that no special supervisor of day-school classes for the deaf has been provided by the State department of education. Plans were under way to remedy this situation, however. The per-capita cost of day-school education for deaf children in the United States averages about $850. The State cost in Ohio in 1933-34 was $144.24, plus approximately $65 for the local cost, making a total of $209.24 for each deaf child.

The residential school for the deaf was the first State benevolent institution in Ohio. It was opened in 1829 for the purpose of educating deaf persons who could not be educated in the public schools. The age at which pupils may be received and the length of time they may attend is determined by the director of education and the superintendent of the school, in accordance with the health, habits, temp-

perament, and mental qualifications of the individual. The capacity of the school is 500 and the enrollment for 1933-34, including day pupils, was 518. The per-capita cost of education and maintenance at the school is $373.29, paid entirely from the State appropriation, which for 1934 amounted to $204,084.

The administration of the school for the deaf was also transferred to the State department of education in 1927, but a lack of cooperation between the institution and the day-school classes persisted in spite of the close administrative relationship.
